Water Filter Descriptions

- 1** Sediment Filter reduces particles (such as dirt, sand, and rust), bacteria, as small as 5 microns, and protects the Carbon and Membrane Filters.
- 2** Carbon Filters are made from activated carbon which reduces chlorine, heavy metals and harmful organic chemicals, as small as 5 microns, in two stages.
- 3** Alkaline Antioxidant Filter increases pH and antioxidant. It also improves taste by releasing healthy minerals like calcium and magnesium.
- 4** TCR Taste and Odor reduces unpleasant tastes and lingering harmful organic chemicals that may still be present.
- 5** Membrane Filter reduces up to 99.9% of water contaminants such as heavy metals, waterborne microorganisms, and harmful organic chemicals.

Actual filter life depends on water quality and usage.
